WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Print as one tub, open side up: 261 x 196 x 164.5 mm outside the walls (275 x 204 over pads and towers), 3 mm walls and floor. Needs a printer bed of at least 300 x 300 mm.

Cooling end (right): two pipe slots 10 wide, 25 each side of the centre, and a cable slot 6 wide, 40 toward the front, each open at the rim and ending in a half-round at 114 up.

Pads 14 x 16 x 4 proud on both end faces, 89 each side of centre, centred 40 and 145 up; one M3 heat-set insert in each.

Two towers 10 x 10 x 10 on the cooling end, 44 each side, 126 up; M3 insert.

Handle pads 20 dia x 4 at the middle of front and back, 136 up; M5 insert.

Latch pads 20 x 16 x 4 on the front, 72 each side, 142 to 158 up; 2 x M3.

Set every insert with the soldering iron before any VIP goes in.

No screw or drill may ever go through a wall: a VIP sits behind it.

Check: the inside is 255 x 190, square, within 0.5 mm.
