WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Open box 205 x 140 x 95 mm outside, 1.0 mm sheet, folded from one cross-shaped blank by a sheet metal shop; TIG weld the four corners. Fold a 5 mm flange inward all round the rim, last. It is the landing for the lid cold plate tray and must be flat within 0.3 mm. Cooling end wall: two riser slots 9 wide, 25 each side of centre, open at the rim and running down to 67.5 mm above the floor. Cable hole 6 mm, 40 toward the front, 86 up; fit a grommet. Deburr every edge: the pouches must not be cut. Fit: stands on the VIP floor panel; its walls touch the VIP walls. Check: the inside is 203 x 138 and square; the rim flange lies flat.
