WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Open box 175 x 110 x 80 mm outside, 1.5 mm sheet, folded from one blank by a sheet metal shop; TIG weld the four corners.
Cable hole 6 mm in the cooling-end wall, 40 toward the front, 71 up; fit a grommet.
Deburr all edges; round the top edge so it cannot cut a hand.
Glue the four feet under it and the collar round its top (CPD-DWG-107) with two-part epoxy.
Clip the liner probe inside the back wall and the 3 degree cut-out inside the cooling-end wall (thermal paste under each).
Fit: stands on its feet on the can floor; the collar centres it inside the can's rim flange with 0.5 mm all round.
Check: inside 172 x 107 x 78.5; the top edge flat within 0.3 mm.
